

Focus on.. EMERGENCY FEEDING

**BE PREPARED
FOR EVERY EVENTUALITY**

Our mission is to provide you and your patients better food, safely, wherever they are...

Everything you need for emergency feeding is here, now!

At Rieber, our expertise lies in purpose-designed equipment for feeding people on the move, in isolation, or away from the main kitchen. We make simple, cost effective, practical food transport and serving solutions that are proven to work safely – exactly what’s needed now.

For everything you need for emergency feeding, Rieber is here to help you!

... if you can't get the person to the meal, take the meal to the person.

Completely mobile

For mass catering

Keeping food warm

For feeding in isolation

BE PREPARED FOR EVERY EVENTUALITY

Thermoport food transport boxes

The Thermoport series is the perfect solution for moving meals cooked in one place and serving them somewhere else, whether it's for staff meals, for patients or to those in isolation.

Meals can be transported ready plated, with protective plate covers and hot or cold pellets to maintain temperature.

Bulk meals in GN containers can be transported without spillage thanks to non-spill lids.

Thermoport 1000K and KB food transport boxes are incredibly tough but lightweight, easy to use and with the highest standard in hygiene. Using Rolliport trolleys or heavy-duty castors, this is a food transport system designed to move meals across all terrain to where it is needed.

Thermoport individual meal boxes

During the current situation, there are many circumstances where meals need to be served in isolation. The Thermoport 10 insulated meal boxes keep food hot, cold or ambient and are designed to allow a complete meal to be served. Reusable, robust and dishwasher safe. Non porous plastic - perfect for infection control.

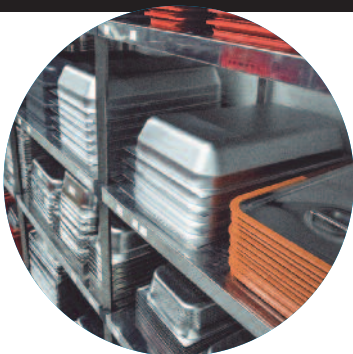

Rieber individual meal trays

Rieber's individual meal tray offers the ideal, robust, fast, efficient and high-quality meal delivery system for hot, cold and ambient meals. The tray is made from 1mm stainless steel, with lid, providing the highest level of hygiene and strength.

1.25l filling volume and with three compartments, the meal tray is compatible with all Thermoport food transport systems.

Thermoport 21

Made of non-porous plastic, so ideal from an infection control point of view, the Thermoport 21 holds a standard NHS 9" plate. It will keep a main meal and soup or dessert hot for an hour, or with a heat holding pellet much longer. There are also two non-heated side dish bowls, room for cutlery and a menu card on each box, for identification purposes. Boxes can be stacked 3 high for ease of transport.

GN Pans and anti-spill lids

Rieber is the world's largest manufacturer of GN pans. Made from food grade stainless steel we have many sizes which are perfect for transporting and serving food. Simple, robust and hygienic. Also available with anti-spill lids, ensuring nothing spills out during travel.
